RE: LPFM
MM Docket 99-25

I strongly support the creation of LPFM service. If created, many minority groups will have the voice that never had before. It could create numerous opportunities to many individuals who wish to enter the broadcasting field but never had the chance before with giant media corporations.

As part of my comment, I ask the FCC not to apply all of it's tough requirements and regulations to LP10 & LP100 stations because of their low powers; and to use a different method of predicting interference to enable all small and large communities to have their LPFM stations.

In my support of the creation of LPFM service, I also propose the following:

- 1- LPFM stations should be allowed to generate revenues.
- 2- LPFM stations should be allowed to have variable & flexible operating hours because volunteering members of the community will carry most of the jobs.
- 3- LP10 and LP100 stations should be allowed to use any type of antenna & polarization.
- 4- both 2nd & 3rd adjacent channel restrictions should not be considered for LPFM stations.
